

## Release Notes Version 2.0.13

### **Bug Fixes**

- Dr First
  - Ever since RCopia4, UnifiMD has been more susceptible to browser crashes. We have added better error handling to allow UnifiMD to run unaffected by Browser errors related to Rcopia.
  - Last call date and time are now reporting correctly in the Dr First API Logs
- Spelling and labels
  - The word Referred in the Clinical Encounters Window.
  - The word Privilege in the Emergency Access Prompt.
  - Labs Tab now reads Lab Results
  - Patient First and Last name in Chart Summary now display correctly
- Clinical Encounter - Location Column added for sorting purposes
- Notes
  - Toolbar customization will now save as expected
  - Font size and type will remember your last selection
- Notes/Guides/Letters
  - Signed by User Time Stamp will now display at the end of the note when signing.
  - Notes Header vs User Preference Header
    - When a user adds a custom header to a Note Guide, then the User Preference Header/Footer settings will be ignored. If the guide has no header, then User Preferences will function.
- Reports
  - If a lab report is on the Historical tab of the patients' chart, it will no longer display on the Unreviewed Labs Report

### **New Features**

- Notes – History Button - Up/Down buttons are now present to let the chooser create a custom order to insert data into the note.
- Notes/Guides/Letters
  - Toolbar customization will automatically open when starting a new guide, note or letter if a user previously, accidentally removed all toolbar options
- Faxing
  - When composing a new fax, you can now
    - Attach a Patient
    - Choose fax recipients based on the patients Associations tab in demographics
      - Available when faxing from Tools, Notes and Letters
      - If a patient does not have an association, that option will be grey
    - Select files from the patient's chart

- Multiple files will be combined into a single PDF and send in a single fax.
- Cover sheet Note field added
- Preview button added
- Edit and Resend will now make a copy of the selected fax and create a new job, so the history of both attempts can be recorded
- Core Program
  - The prompt for new versions is now visually more alarming. It features a stop sign, more specific warnings and recommendations about performing the update and a second confirmation before allowing a user to run updates.
  - Requires .Net Framework 4.6 or Higher
  - Upgraded to DevExpress 18.2 for optimized WinForms and security
  - The following tables are being compressed to reduce database size and disk usage
    - Com\_Multimedia
    - Com\_MultimediaContent
    - DrFirst\_RcopiaErrorLog
    - DrFirst\_RequestLog
- Dr First
  - Mobile Phone Number is now included in the Send Patient API Call.
  - The Embedded Browser is now Chromium based instead of Internet Explorer
  - Clear Cache added to Dr First > Website
- Medications added manually in UnifiMD
  - Medication type now defaults to current
  - Medication fields reorganized
- Messaging
  - When sending a new message, the Send To will now default to Users
