Release Notes Version 2.0.22

Bug Fixes

- Resolved Unhandled exception using the patient bulk import from Excel
- Resolved Unhandled exception when merging patients
- Correct lab statuses now print correctly instead of printing the word "Some".
- Removed Clear Last Sync button from Lytec Interface.   To sync patients and/or appointments that have a modified date older than the last sync, simply change the last sync date within the calendar next to patients and/or appointments
- Various unhandled exceptions and memory errors have been resolved in this version. These errors were not reported by any user. They were just items discovered via the trace logs.   They may or may not be related to open tickets.

New Features

- New Text Values can now be added to the list in Multi Select Combo Boxes in Custom Fields, Chief Complaints and Clinical Assessments
